Always read the label and use only as directed. If symptoms persist, please see your healthcare professional.

Resolve
SolvEasy

The complete offering to treat fungal infections
Combination therapy can help improve patient compliance because your patients only have to use one product instead of two when suffering from inflamed fungal infections.

Combination therapy (miconazole and hydrocortisone) has been found to be superior in suppressing inflammation compared to monotherapy (hydrocortisone or miconazole nitrate).6, 3

Resolve Plus 1% contains miconazole nitrate (a broad-spectrum antifungal) and hydrocortisone (anti-inflammatory agent) combined in a soothing cream base specially formulated to treat inflamed fungal infections.

Resolve Plus 1% combines hydrocortisone 1% (w/w) to reduce inflammation and miconazole nitrate 2% (w/w), a broad-spectrum antifungal with anti-bacterial activity against Gram-positive organisms such as Staphylococcus aureus.7

Resolve Plus 1% provides fast and effective relief for patients by treating the infection and reducing inflammation, helping them feel better faster.

The hydrocortisone 1% / miconazole 2% combination has been shown to result in higher cure rates than either miconazole 2% or hydrocortisone 1% alone in the treatment of fungal infected seborrhoeic dermatitis.5

Combination therapy can help improve patient compliance because your patients only have to use one product instead of two when suffering from inflamed fungal infections.

Combination therapy (miconazole and hydrocortisone) has been found to be superior in suppressing inflammation compared to monotherapy (hydrocortisone or miconazole nitrate).6, 3

Resolve Plus 1% is simple and easy to use.

Resolve Plus 1% does not contain common irritants such as parabens, propylene glycol or lanolin, and is fragrance free.

Resolve Plus 0.5 also available.

Treat fungal infections

Solve tinea fast:

SolvEasy Tinea Cream

One of the common causes of treatment failure for tinea is non-compliance by the patient. SolvEasy Tinea Cream is a once daily treatment for tinea, over seven days and is designed to increase patient compliance due to fewer applications.

SolvEasy Tinea Cream contains 1% terbinafine hydrochloride.

- Terbinafine hydrochloride exerts a primarily fungicidal action and is effective against dermatophytes.6 However, it has limited coverage against bacteria.6
- Terbinafine hydrochloride is effective at low levels and diffuses rapidly into the stratum corneum from topical applications.4
- Terbinafine hydrochloride enables a short application time by rapid penetration in the stratum corneum and remaining active after the application stops. This results in low chance of relapse.
- Terbinafine hydrochloride enables a short application time by bleeding to the skin and remaining active after the application stops.
- SolvEasy Tinea Cream is effective and treats tinea quickly and easily with just one application a day for seven days.
- SolvEasy Tinea Cream does not contain common irritants such as parabens, propylene glycol or lanolin, and is fragrance free.
